

cent
a
at least two bridging members extending between and connecting said panels; and
wherein said first panel extends at an obtuse angle with respect to the vertical [outwardly
and upwardly from said bottom thereof] to define a supporting shelf.

41. (amended) A building component comprising:

first and second insulating foam panels arranged to define therebetween a space for
receiving pourable building material, and

at least two bridging members extending between and connecting said panels, each
bridging member comprising:

a pair of end plates;

a thin narrow strip member joining the mid-areas of said end plates;

a series of first narrow bracing members extending from positions adjacent a mid-point of
said narrow strip member to positions spaced a short distance from the ends of said end plates;

a series of second narrow bracing members extending from positions on said first bracing
members to positions on said strip member intermediate said end plates and said mid-point of
said strip member; and

wherein said first panel extends at an obtuse angle with respect to the vertical [outwardly
and upwardly from a bottom portion thereof] to define a supporting shelf.
